## Professional Summary

Creative and technically sharp software engineering student focusing on **backend development**, **real-time systems**, and **culturally expressive tech tools**. I specialize in applications that preserve linguistic heritage and foster interactive learning — from **lyric synchronization apps** to **AI-driven climate tools**. Passionate about clean architecture, intelligent systems, and integrating African narratives into digital experiences.

## Technical Skills

Area	Tools & Technologies
Backend	Node.js, Express.js, MongoDB, REST APIs
Frontend	React.js, Vite, Tailwind CSS
Real-Time Tech	Web Speech API, Lyric Syncing, Socket.IO
Dev Tools	Git, Docker, Postman, VS Code
Programming	JavaScript, Python, Java
Creative Tech	Kikuyu localization, tone parsing, JSON lyric formatting

## Education & Certifications

**Bachelor of Science in Computer Science**(Ongoing)  
Focus: Backend engineering, real-time systems, AI integration

**Certificate in Plant Operations**— 2018  
Trained in safe and efficient heavy machinery handling

**Certificate in First Aid & Fire Safety**— 2018  
Completed certified emergency response and fire safety training

**Certificate in Microsoft Office Packages**— 2024  
Proficient in Word, Excel, PowerPoint, Access for data management and reporting

**Certificate of Participation: Introduction to Cybersecurity**— 2024  
Covered digital safety, authentication, and network threat awareness

## Projects

**Vocal Sync**  
Real-time Kikuyu lyric synchronization tool

- **Stack:** React, Web Speech API, Tailwind, Node, MongoDB

- **Features:** Pronunciation scoring, live feedback, tone-sensitive parsing

#### **Accuracy Scorer API**

Microservice evaluating lyrical pronunciation against the original text

- **Stack:** Express, MongoDB
- **Output:** JSON score report with word-level analysis

#### **Kikuyu Lyric Formatter**

CLI/web tool converting lyrics into structured tone-aware JSON

- Built for integration into Vocal Sync and other cultural apps

#### **Cultural Speech Visualizer (Prototype)**

Real-time tone and vowel intensity visualizer

- **Stack:** React, Web Audio API, Canvas

## **Hackathons & Events (2025)**

#### **Open Source Sprint — May 2025**

- Merged PRs for Kikuyu and Swahili localization
- Debugged audio sync issues in open lyric tools

#### **PLP Hackathon — June 2025 (Finalist)**

- Co-built ML-based climate forecast API
- Tools: Flask, TensorFlow, Scikit-Learn

#### **AI Tools Challenge — July 2025**

- Developed crypto sentiment chatbot with Python NLP
- Presented at PLP AI Showcase

## **Recognition & Leadership**

- **Top Backend Developer – 2024**
- **Peer Mentor**– Led sessions on full-stack deployment
- **GitHub Contributor**– Improved real-time UI & accessibility
- **FlutterFest (2023)**– Demoed Vocal Sync cultural app

## **Languages**

- **English**– Fluent

- **Swahili**– Fluent
- **Kikuyu**– Conversational / Cultural-technical
